

13__Break__Continue__Pass

September 15, 2026

[2]: *# Break keyword breaks out/stops the current loop*

```
numbers= [1,2,3,4,5];

for i in numbers:
    if i == 3:
        print("Found the number 3")
        break
    print(i)
```

```
1
2
Found the number 3
```

[5]: *# For else*

```
numbers= [1,2,3,4,5];

for i in numbers:
    if i == 3:
        print("Found the number 3")
        break
    print(f"current number is {i}")
else:
    print("stil insde the loop")

print("Came out of the loop")
```

```
current number is 1
current number is 2
Found the number 3
Came out of the loop
```

[11]: *# Conitnue is used to skip that current iteration but will continue with next_*
↪iterable values
SKipping even numbers and printing only odd numbers

```
numbers= [1,2,3,4,5]
```

```
for i in numbers:
    if i%2 == 0:
        print(f"Skipping the number {i}")
        continue
    print(f"Printing the number {i}")
```

Printing the number 1
Skipping the number 2
Printing the number 3
Skipping the number 4
Printing the number 5

[13]: *# Pass is used to do nothing*

```
numbers = [1,2,3,4,5,6]
for i in numbers:
    if i == 4:
        print(f"Skipping the number {i}")
        pass
    else:
        print(i)
```

1
2
3
Skipping the number 4
5
6
